ADDENDUM: Product structuring	18

SCOPE and CONTEXT

Product structuring is particularly important for the smooth running of our management system.

This structuring must:

- Allow our dealers and internal staff to input new deals intuitively and quickly
- Ensure the efficient and automated direction of these deals downstream
- Correctly reflect the sales nature of the quotes and the legal nature of the contracts

It must also allow, in an automated way:

- The correct IFRS qualification of the deals impacted
- The correct VAT application for all these deals
- The correct accounting processing (French GAAP and Local GAAP) for all these deals.

Master Products, National Products & Variants

To reach these objectives, the products are organised into three levels:

- Level 1, international: the “Master Products”,
- Level 2, national: the “National Products”,
- Level 3, mainly international: the “Variants”

The “Master Products” are categories of a legal and accounting nature.

The “National Products” are the versions of a ‘Master Product’ in the countries.

The “Variants” are categories of an operational and sales nature (e.g. ‘out of season’, ‘extension’, ‘variable rate’).

Each product within the information system is thus made up of a ‘National Product’ (national version of a ‘Master Product’), and of one or several ‘Variants’.

Brandings

The system should provide ability to manage bespoke logos and design rules. This is what we call Branding. Branding may be used for JVs, and for Vendor Programs as well. Logos and design rules should apply to screens and to generated documents.

A Branding may be attached to each given product (“National Product” + possible “Variants”).

MASTER PRODUCTS

The “Master Products” are categories of a legal and accounting nature.

The products falling within the same “Master Product” share a set of legal characteristics (in particular with regard to the asset ownership), and accounting characteristics.

They in particular share the answers to the questions below:

- Should we manage the property of an asset?
- If yes, who is the owner of the asset, by civil law?
- If yes, who is the owner of the asset, from an economic perspective?
- Deal with RV or not?
- Existence of an option given to the lessee on this residual value?

The direct input of the Master Product linked to a deal is not available to users. They are only allowed to input National Products or sets {“National Product” + “Variants”}.

The Master Product is then deduced from the National Product keyed in.

The value of the Master Product must however be stored in the information system, so as to be easily used in the Risk & Finance reports and queries.

List of Master Products

The current 10 “Master Products” to have in mind for Moonrise are as follows:

Master Product	Asset property	Owner by civil law	Owner from eco. perspective	Residual Value
Assigned receivables	No	N/A	N/A	No
Hire Purchase	Yes	Lessor	Lessee	N/A

Leasing	Yes	Lessor	Lessor	Yes / Lessee OTP
Loan	No	N/A	N/A	No
Mietkauf	Yes	Lessor	Lessee	N/A
Real Estate Leasing	Yes	Lessor	Lessor	Yes / Lessee OTP
Real Estate Loan	No	N/A	N/A	No
Renting	Yes	Lessor	Lessor	Yes / No Lessee OTP
Revolving Loan	No	N/A	N/A	No
Wholesale	No	N/A	N/A	No

This list may evolve depending on the migrations of various countries on the system.

Assigned receivables

LS is purchasing a stream of future receivables from a third party (the “assignor”). The amount financed is the receivables discounted at a pre-agreed yield.

The assignor assigns to LS the right to collect receivables (future cash flow received from the lessee).

The assignment may be processed after the activation date based on discounting of the future rentals.

The assignor invoices the lessee.

The receivables are considered as a security, but the registration is not always processed.

Details of the lessee may also be recorded for exposure – credit risks is at lessee level - reporting and other purposes.

Under an assignment of receivables, we may obtain title on the asset (“sale and assignment”) depending on the territory or get a collateral via remedies such as suspension of rights to use.

The assignor receives the full and immediate payment from us for the total Net Present Value of the rental contract upon assignment.

Depending upon local regulation, minimum requirement for enforceability needs to be looked at in order for the receivable to be irrevocable and the assignment non-disputable.

The agreement may include maintenance (re-invoiced by the provider) & insurance as a service. There may be multiple services.

Disclosure

The assignment may be disclosed to the lessee and the payment collected directly from him. A notice of assignment may be sent to the lessee at the set to live step (disclosed) or at point of disclosure (undisclosed).

Hire Purchase

In a Hire Purchase contract, LS purchases an asset for which the customer pays periodically instalments according to a repayment profile defined in the agreement. LS finances the VAT inclusive amount.

From a legal point of view, LS is the owner of the asset until the end of the contract with the customer becoming the owner of the asset after payment of the last instalment and any option to purchase fee.

From the tax standpoint, the asset is entered onto the customer's books from the start of the contract. The instalments pay off in full (in the financial sense) the capital paid out by LS. At the end of the contract (natural or early termination) an Option to Purchase (OTP) fee is invoiced which confirms the transfer of title of the asset.

For regulated HP we need to add the halves and thirds calculation rules.

Leasing

A Leasing is a lease that is primarily a method of raising finance to pay for assets, rather than a short-term rental.

LS purchases an asset and gives it to the customer (lessee). The lessee repays according to a repayment profile defined in the lease agreement (instalments). LS is the owner of the asset until the asset is sold. The agreement will include a residual value (RV) which is included in the lessee contractual documentation, in amount or percentage and proposed to this lessee as an option to purchase. The lessee can decide to buy the asset or to return it or to keep on financing the asset at a much lower price. The asset can also be sold to a third party (at Market price).

The agreement may include maintenance (re-invoiced by the provider) & insurance as a service. There may be multiple services.

Mietkauf

The aim is to let somebody have the capital equipment (Investitionsgut) in return for payment of the rent for a fixed rental duration.

The customer places a first order for the capital equipment according to his specifications from the supplier.

LS orders on behalf of the customer from the supplier. Thus, LS buys the asset from the seller (-> sale contract).

The hirer (LS) commits to surrender the goods – the renter (customer) to pay the stipulated rentals and to use the asset for the intended purpose.

Owner of the equipment: after the payment of the VAT amount at the beginning of the contract, the customer becomes automatically the commercial owner of the equipment and we remain until the end of the contract the owner by civil law. We are the economical owner for one logical second (purchase and immediate sale). Therefore, we have to account for VAT input and output.

Invoicing of the instalments: during the whole life of the contract without VAT

From a legal and fiscal point of view, this financial product is a sale, which is paid in instalments. Therefore, the total VAT has to be invoiced and is due at the beginning of the contract when we sell the equipment to the customer.

At the time of the activation, we send a schedule to the customer, which includes:

- all rentals he has to pay and
- the total VAT as one amount.

The total amount of VAT is immediately due together with the first rental. So all the rentals are without VAT for the whole life of the contract.

Real Estate Lease

By the term 'property leasing', commonly known as "real estate lease", we mean the contract by which a party, known as the lessor, undertakes to make available to the other party, the said lessee, for a given time, a real estate against the payment of a fee payable at periodic deadlines, determined in relation to the value of the property, the duration of the contract and other elements. Following delivery of the building, the lessee is liable for:

- the payment of rents to the lessor
- the various municipal and utility expenses (taxes, insurance, maintenance...) like any owner.

The Real Estate Lease is of the "Lease with Option To Purchase" type.

The Lessor grants a long-term lease to the lessee (usually for 7, 12 to 20 years) as well as a unilateral option to purchase at the end of the lease or in advance, which is equal to one euro or to the price fixed by agreement at the signature of the contract, where appropriate.

Renting

A Renting agreement is a lease that is primarily a method of raising finance to pay for assets, rather than a short term rental.

LS purchases an asset and rents it to the customer. The customer repays according to a repayment profile defined in the rental agreement (rentals). LS is the owner of the asset until the asset is sold. The agreement will include a residual value (RV) which may be a pre-agreed sale to a third party (put option / buyback) but never pre-agreed to the customer. The put option may oblige the third party to purchase the asset or give the third party the option to elect to purchase the asset.

The residual value may be a notional amount and may be covered by a repurchase or remarketing agreement (sales agency).

The agreement may include maintenance (re-invoiced by the provider) & insurance as a service. There may be multiple services.

Return conditions and excess usage (e.g. mileage) may be invoiced on the return of the asset.

At the end of the agreement, the customer may request an extension, with a revised RV negotiated with the third party.

From a tax standpoint, the asset is entered on the LS books at the start of the contract.

Revolving Loan

LS “revolving loan” is a multiple-use professional credit authorization valid for one year and renewable by tacit agreement.

“Renewable” means new withdraw possible if not extended (but no automated requirement for a full settlement of the outstanding).

Its use is for professional expenses at the request of the customer.

No asset is attached.

The amount of available credit decreases and increases as funds are withdrawn and paid back.

This credit line is continuously evolving:

- Decreased by each customer drawdown
- Increased by each customer repayment (for its share in capital)

Repayments are on a monthly basis (no other periodicity). For simplicity sake, repayments may all be considered at the same date, for all contracts (To be confirmed).

Geographical scope (to start): France and Italy.

Example

Monthly repayments of 5% of cumulative drawdowns						
Rate of 1% per month (assuming reference rate is stable)						
		Repayment	Repayment	Repayment	Authorized	Cumulative
Method 1	Drawdown	Total	Agios	Capital	Credit line	Drawdown
31/01 2019					100 000 €	0 €
15/02/2019	20 000 €				80 000 €	20 000 €
28/02/2019		1 000 €	100 €	900 €	80 900 €	20 000 €
15/03/2019	30 000 €				50 900 €	50 000 €
31/03/2019		2 500 €	341 €	2 159 €	53 059 €	50 000 €

Wholesale

Wholesale Finance is a generic term covering solutions conceived in cooperation with a Drawer (in general a Manufacturer) and dedicated to a network of Drawees (in general Dealers or Distributors or Resellers).

It is a short-term offer aiming at:

- Managing a B to B relationship
- Managing receivables issued by a Manufacturer on a recurrent Dealers’ portfolio
- Granting additional terms of payments to Dealers beyond the Manufacturer’s terms
- Covering mainly European countries.

Depending on the Manufacturer, the Wholesale Finance program will provide one or several or all of the following services:

- Managing receivables of the Dealers’ network
- Covering the Manufacturer’s credit risk for its Dealers’ network
- Providing financial short-term solutions to support Manufacturer’s sales
- Providing payment facilities to the Dealers’ network
- Providing the Manufacturer with cash by funding the Dealers’ receivables
- Granting revenues recognition on Manufacturer’s sales

NATIONAL PRODUCTS

The “National products” are versions of the “Master Products” in the countries.

They are essential for good management of the “Lease” contracts and must be stored as such, in the information system.

Around thirty national products (Wholesale excluded) have to be planned for the 7 countries covered by the information system.

It must be possible to create in a country several “National Products” falling within the same “Master Product”.

The authorized users must be able to directly input in the system a National Product when creating a deal.

They must also be able to input a product of the type “National product + Variants” among those available in the system: in this case, the National Product is deduced from the input.

The dealers must also be able to choose a promotional campaign or a pricing term among those provided for by their Trade Agreement: in this case also, the National Product is deduced from the input.

The value of the National Product must in any case be stored in the information system, so as to be easily used in the Risk & Finance reports and queries.

List of National Products

This list is purely indicative for the first 3 Moonrise countries (always Wholesale excluded):

- 5 in France: Rachat de créance, Crédit-Bail, Crédit, Crédit-Bail Immobilier, Location Financière
- 5 in Italy: Riacquisto di Crediti, Locazione Finanziaria, Credito, Locazione Finanziaria Immobiliare, Locazione Operativa
- 4 in the UK: Assigned receivables, Hire Purchase, Loan, Finance Lease, Renting.

VARIANTS

The “National Products” are not sufficient to describe all the behaviours expected from the deals, in particular the operational behaviours (end of contract, presence of services, fixed or variable rate...).

This is why it is necessary to complete the “National Products” classification with a “Variants” catalogue.

It must be possible to link each ‘National Product’ to one or several of these “Variants”.

It is this set, which will allow to:

- Pilot the commercial offer, both at European and local level
- Determine the contractual documentation of the deal

- Perfectly direct the deals in the information system without the user having to input a lot of data
- Determine the fees to be applied to the deal (real and potential fees)
- Apply regulatory controls (in particular the usury rate, by taking into account all the elements of the deal, including the potential fees)
- Finalize, in some cases, the accounting and fiscal transactions (e.g. VAT Flex and VAT Upfront specific to the Netherlands)

The “Variants” may evolve over time for the same contract. The “Variant” reflects the future behaviour of the deal.

Some ‘Variants’ may be specific to some countries, but the general idea is to benefit from an international panel of “Variants”, from which the countries and Business Units will be able to draw without reservation.

The authorized users must be able to directly input in the system a product of the type “National product + Variants” among those available in the system: in this case, the Variants are deduced from the input.

The dealers must be able to choose a promotional campaign or a pricing term among those provided for by their Trade Agreement: in this case also, the Variants are deduced from the input.

The value of the set “National product + Variants” must in any case be stored in the information system, so as to be easily used in the reports and queries of the BUs, countries, IBLs and Functions.

The “Variants” are built by integration of one or several operational characteristics: see below.

Variants with financial profiles

Specific financial profiles may be defined in a Variant, if it makes sense from a business perspective. If such variants are defined, the profiles of the Lease contracts should be controlled in the system all along the value chain (some of them being allowed, some of them being forbidden, right from the quote phase).

E.g. "School product" with zero in July and August (and automatic adjustment in case of rescheduling)

Variants with extension rules

Extension rules may be added to a “Variant” provided this is allowed taking into consideration:

- The “National Product” features
- The country rules
- The Lessor

If such extension rules are added to Variants, the consistency between actions processed and products should be controlled by the system all along the value chain.

E.g. Minimum term rental with a secondary period (UK)

Variants with services

Services may be added to a Variant provided this is allowed taking into consideration:

- The “National Product” features
- The country rules
- The Lessor

Services may be added in all modes (all in, pass through), and all types (maintenance, replacement...), with or without usage commitment, or only in some restricted modes.

NB: Some services may, of course, be individually added to Lease contracts, without the frame of a Variant.

Variants with fees

In some cases, fees (real and potential) may be a constitutive part of a Variant.

On the other hand, in many cases, fees may be used in Lease contracts (e.g. Litigation fees), without being a constitutive part of a Variant.

Variants with insurances

Insurance may be added to a “Variant” provided this is allowed taking into consideration:

- The “National Product” features
- The country rules
- The Lessor

On the other hand, in many cases, insurances may be used in Lease contracts without being a constitutive part of a Variant.

Variant Cash Advance

Cash Advance is an offer where LS pays out “up front/in advance” a portion of the future production of the partner for the month to come. The repayment/amortization of the cash advance by the partner is automatically done by compensation with the files activated during the following month.

Variant Break Clause

The customer has an option to stop the deal at a certain point and walk away e.g. on a 5 year fixed term rental agreement there can be a break clause at the end of 3 years. If the customer exercises the break clause the remaining exposure is picked up by the dealer/intro source.

Capturing the existence of break clauses is important for the calculation of exposures for the customer and intro source.

Variant Sale and Assignment

Deals acquired through Sale and Assignment should be monitored in the system.

Variant TVP

TVP is a full service with pay for use agreement: number of copies for a photocopier.

LS purchases an asset and rents it to the customer. The agreement finishes at the earlier of total volumes being achieved or the agreement term. LS is the owner of the asset until the asset is sold.

Notional residual values are not loaded into the lessee's rental profile on the system but are loaded as end of contract title transfer fee.

The put option may oblige the third party to purchase the asset or may give the third party the option to elect to purchase the asset.

There is a contractual use defined in respect of the use per period (month, quarter, etc.), with a minimum level on which the repayment profile is based. Where the customer usage is more than the minimum, excess copies are invoiced to accelerate the capital repayment (up to the RV). Usage for the period is calculated without reference to any over or under usage in prior periods. Excess copies may be invoiced and collected by direct debit on any date. Usage may be aggregated over multiple assets or over a year's usage.

The initial meter reading is recorded prior to the set to live (non-zero if the asset is second hand). The maintenance provider sends us the meter readings periodically, which are logged and used to calculate excess copies. Meter readings continue throughout the agreement's duration until a final reading is provided by the dealer.

The agreement includes maintenance (re-invoiced by the provider) & may include insurance as a service. There may be multiple services. The maintenance provider may amend the maintenance amount periodically (not index linked).

The contractual usage may be revised periodically. The finance element of the rental will not change, but the finance cost per copy may be amended. The maintenance element of the rental and the maintenance cost per copy may both be amended.

If total volumes are reached, the initial term continues until notice to terminate is received. A final meter reading is required from the dealer.

If customer has not used the total volume by the end of the initial term, an extension period follows (up to 12 months, zero minimum rental, no RV amortization). The RV is carried forward until termination.

Prior to total volume being reached, any maintenance relating to excess copies is passed to the dealer. Once total volumes have been reached, the whole excess copy charge, less any maintenance handling fee, is passed to the dealer.

The agreement may cover more than one asset and the equipment cost may be paid out to more than one supplier.

The agreement start date, set to live date and first rental date may occur on different days in the month.

From a tax standpoint, the asset is entered on the books of LS at the start of the contract.

Variant Fixed Term Rental Agreement (FTR)

- Fixed term rental agreement (FTR) contracts are Finance Lease contracts. At the end of the agreement, the customer may request an extension, with a revised RV negotiated with the third party or simply return the asset, subject to return conditions.

Variant Minimum Term Rental Agreement (MTRA)

- Minimum term rental agreement (MTRA) contracts are Finance Lease contracts. The lessee hires an asset by paying rentals for a minimum period. The agreement automatically goes into extension at the end of the primary period if the customer has not given notice to terminate. The rentals collected in the extension period tend to be used to wash down any RV that exists before being shared with the introductory source.

Variant VAT Collection

- LS collects rentals from the end customer VAT included. LS pays the VAT received to the provider on receipt.

Variant Index rate

- Index rate: a variant of Leasing main contract, but with specific calculations, contractual attachment, specific invoice /credit note each quarter with specific communications to send to the Customer with the calculation details

Variant Contract Transfer

- The current financial product "Contract Transfer with Mandate" and "Contract Transfer Simple" are versions of the National Product "Locazione Operativa".

Variant Credito Agrario

- "Credito Agrario" is a member of the "Loan" family, required to manage specific means of payment: "Effetti Cambiari". Relevant accounting schemes and specific contractual documentation should be managed

Variant Software Lease: Software as a Service (SaaS)

What is Software as a Service (SaaS) ? The editor delivers the software as an on line service rather than as a product. It enables the user to use the software more in line with its business model. The license is therefore also not perpetual but agreed for a fix term. "Cloud Computing" is trendy term when people speak about Software as a Service.

SaaS includes

- A service to provide a right to use a software remotely through the web (i.e. cloud)
- Related services (support, maintenance,...)

SaaS is a unique and complex contract as it includes duties coming from various contracts:

- License contract which allows the Lessee to use the service
- Maintenance contract which includes the updates provided by the Vendor
- Support contract which includes a hot line for the users

Progression may be calculated on an annual basis, and shared with the Introductory Source

Variant Software Lease: Annuity

Some Cloud products may be financed via assignment of receivables on an annuity structure

- Commitment of the Lessee over 3 years (true-up possible but no true-down)
- Commitment of the Lessor to fund the Editor on a yearly basis, subject to Lessee not to be in default
- Monthly or quarterly payment by the Lessee with possibility of grace period
- "Switch-off" rights granted by the Editor

Variant Finance Lease NL

From the tax standpoint, the asset is entered onto the Lessee's books from the start of the contract. The instalments pay off in full (in the financial sense) the capital paid out by the finance company. At the end of the contract (natural or early termination) an Option to Purchase (Option To Purchase) fee is invoiced which confirms the transfer of title of the asset.

Variant Finance Lease NL – VAT Flex

The VAT on the asset can be invoiced and paid by the Lessee at activation date or 3 or 4 month after activation with a rental. In this case, the financial base is decreased from this amount

Variant Healthcare Lease Spain

Whole of VAT being paid at Set To Live step (Whole of the rentals)

Variant Lease with put option

An option is a contract that gives the buyer the right to buy/sell the underlying asset at an agreed upon price during a certain period of time, or on a specific date. Options can be classified as call or put options.

The Lessee grants the Lessor a put option in the event that the Lessee does not exercise the call option

Put option of the Lessor towards the Lessee, at the value of the Residual Value.

Obligation on the Lessee to purchase the leased equipment at a pre-determined price upon request by the Lessor if the lease is not renewed at the end of the fixed lease period.

Variant Teilmortisation (Non Full Pay Out Leasing)

Variant Vollamortisation (Full Pay Out Leasing)

.

Variant Agency

The assignor assigns a contract to us, and we give him simultaneously a mandate to bill and collect the payments from the Lessee

The repayment is ensured by the assignor

This agency mode could be disclosed or undisclosed to the Lessee

ACCOUNTING QUALIFICATIONS

IFRS qualification

The IFRS qualification of a given deal is not determined by the sole "National Product", or even by the set "National Product" + one or several "variants".

It also depends on other characteristics of the deal to be qualified, such as the country, the asset, the market.

In some cases, changing the sole value of the RV may lead to a change of IFRS qualification for the deal.

This is why it is necessary to implement, in the information system, a module (of the decision tree / DMM type) which will determine the qualification of a deal at its origination, depending on all the characteristics of the deal at that moment.

For your information, the IFRS qualification is determined at the contract origination and it does not change during the whole life of the contract.

This IFRS qualification calculated at the activation will be stored in the information system at contract level, so that it can be used by the booking processes (at the EIR level, by the accounting schemes).

What remains to be determined is if this qualification has to be reconsidered when there is a transfer followed by a concomitant rescheduling.

The IFRS qualification must therefore not depend on the input made by a user, but on the automated calculation resulting from the pricing term or the selected campaign, and resulting from the characteristics of the deal keyed in.

For example, a lease with a non-incentive purchase option (coming from an ad hoc campaign) will have to be considered by the system as an “Operating Lease”, and not as a “Leasing”.

Accounting: French and Local GAAP

Similarly, the accounting in Local GAAP of a given contract is not determined by the sole “National Product”, or even by the set “National Product” + “Variants”.

It also depends on other characteristics of the deal to be booked.

This is why it is necessary to implement, in the information system, a module (of the decision tree / DMM type) which will determine the accounting schemes to be applied, depending on all the characteristics of the deal.

Conversely, it should be possible to determine the accounting in French GAAP from the sole “National Product”, but this point remains to be checked.

Should this point not be confirmed then the module mentioned here above would also have to be available for the French GAAP.

Local GAAP: focus point in Belgium on the Operating Lease case. The “calculation engine” of the accounting schemes and the distinction IFRS OL vs local OL must not be reproduced.

For your information: the French GAAP relate to France of course, but also to its branches outside France.

VAT MANAGEMENT

Similarly, the VAT to be applied to a given contract is not determined by the sole “National Main Product”, or even by the set “National Main Product” + “Variants”.

It also depends on other characteristics of the deal to be qualified, such as the customer type for example.

Another example: In some member states, a financial leasing may be considered as a delivery of good instead of a provision of services.

This is why it is necessary to implement, in the information system, a module (of the decision tree / DMM type) which will determine the VAT to be applied to a contract, depending on all the characteristics of the deal at that moment.

For your information, the VAT to be applied may evolve over time on a contract.

The various VATs applied must be stored in the information system at the contract level.

GOVERNANCE

The creation and the management of product catalogues must be controlled.

The system must restrict the creation of Master Products, of National Products and of Variants to authorized users:

- Corporate users for the Master Products and the Variants
- Country users for the National Products

Management of the Master Products catalogue

The creation of international 'Master Products' is under the remit of the Risk & Finance Division, upon request from the IBLs, and with a control from Legal & Fiscal.

Management of the National Products catalogue

The creation of 'National Products' is under the remit of the requesting country.

This creation will be subject to a functional validation of the "NAC" type initiated by the requesting country (possibly outside the information system), based on a document and the formal validation of this document by all the representatives of the entities and functions involved: Countries/Cluster / Coverage / IBLs / Marketing / Legal / Finance / Risk / RSE / Compliance.

Management of the Variants catalogue

The creation of 'Variants' is under the remit of the IBLs, together with the Corporate Operations & Process Team, the BUs and the countries.

This creation will also be subject to a functional validation of the "NAC" type initiated by the IBLs (possibly outside the information system), based on a document and the formal validation of this document by all the representatives of the entities and functions involved: Countries/Cluster / Coverage / IBLs / Marketing / Legal / Finance / Risk / RSE / Compliance.

ADDENDUM: Product structuring

Business products structuring (a very first version)

The idea is that all LS products can be constructed along 15 axes.

The 15 axes

1. Asset type
 - E.g. Real Estate / Equipment / Software / Non dedicated ...
2. Legal master product
 - Assigned receivables / Loan / Leasing / Renting / Hire Purchase
3. Business specificity (from an Operations perspective)
 - E.g. Annuity / Cash advance / Effeti Cambiari / Finance lease NL spec / Repayment schedule inc. Agios displaying ...
4. Calculation type
 - E.g. Fixed rate / Variable rate / Indexed rate / Revolving ...
5. Customer type
 - E.g. Public / Healthcare ...
6. Service type
 - E.g. TVP service / Pass through service / Top full service / Pass through Mileage service / Top Full Mileage service / Pass through Mileage service ...
7. Extension type
 - E.g. Extension with sharing / Extension without sharing / Second period ...*
8. End of contract type
 - E.g. Buy-back / Priorité prescripteur / Put option / Sale at FMV ...
9. Guarantee attached to product type

- E.g. Sub lease / Top Slice ...
- 10. Financial profile type
 - Out of Season / Break Clause / Non Full Pay Out / Full Pay Out / Adjustable ...
- 11. Sale & Assignment type
 - Disclosed Sale & Assignment / Undisclosed Sale & Assignment
- 12. Insurance type
 - E.g. Asset insurance / Personal insurance / Asset care...
- 13. Fee type
 - E.g. PSS / PSS + / CAP FLEX ...
- 14. VAT management type
 - E.g. VAT Collection / VAT Flex / VAT paid at activation
- 15. Regulation type
 - e.g. UK regulated / Credito Agrario Regulation Italy

First list of products constructed from these 15 axes

1. Real Estate.Leasing...Fixed rate.....
2. Real Estate.Leasing...Variable rate.....
3. Real Estate.Leasing...Indexed rate.....
4. Non dedicated.Loan...Revolving.....
5. Equipment.Renting...Fixed rate....Buy-back...Disclosed sale & Assignment....
6. Equipment.Assigned receivables...Fixed rate.....
7. Software.Assigned receivables..Annuity..Fixed rate.....
8. Equipment.Renting...Fixed rate..TVP service..Buy-back.....
9. Equipment.Loan...Fixed rate.....
